

***YHRIM: The Moon Confirms, TONIGHT at sunset did NOT begin Yom Teruah as many are claiming... but rather tonight at sunset began the 2nd Day of the 7th month, the 1st work day of the week. The reasons for this in listed in the photo with the text below.

The 2nd Sliver was seen here by 4 witnesses. Photos below were taken from shortly after sunset, until approx 30 minutes after sunset. The moon was still up for more than another 30+ minutes, after these were taken, which was more than an hour total.

~Shalom

If the photos below do not show up that well in this email, we also have these posted to our facebook page at these links:

Last night at the beginning of Yom Teruah, we tried to see the, since last month was a 30 day month, we knew it might be possible to see.

But because of how small it was, how short of time it would have been up (*less than 30min*), and how low to the horizon it would have been after the sun set, plus all the chem trails that was in the western sky, we were not able to see it.

BUT we did not distress, because by reading the moon in the previous month, we still knew it was there.

Tonight at the end of Yom Teruah, we easily saw the moon. But we knew that this is the SECOND sliver of the moon this month.

Anyone can know this simply by not only how Large the sliver is, but also by how high it is above the horizon, and how long it stays up after sunset, as it was up for over an hour.

Even though so many are being deceived by the pharisaic judaism's false teachings, saying "tonight began Yom Teruah..."

But by reading the moon this evening after sunset, using the knowledge listed above, we know that tonight at sunset actually began the 2nd Day of the the 7th month, the 1st work day of the week.
